

AI · DATA · EARTH OBSERVATION ·

Seeing Earth, Smarter

AI, data and Earth Observation solutions that turn complex information into actionable intelligence for governments, businesses and organizations.

Deep-Tech AI & Geospatial Consultancy

RASID is an innovation-led deep-tech company turning your data into decision-ready intelligence. We combine deep geospatial expertise, AI, data and software engineering to build production systems for governments, enterprises and international organizations.

01

11 years

11+ years of combined team experience across remote sensing, deep learning, data engineering and problem-solving.

02

Bespoke Consultancy

We work directly with organizations to design and deliver tailored geospatial, data engineering and AI solutions.

03

GoPilot

Our flagship geospatial AI platform, turning natural-language questions into executable Earth Observation workflows.

10, 000+

DATASETS AVAILABLE THROUGH GOPILOT

04

R&D Experience

Our R&D spans AI, remote sensing, data engineering and GeoAI, with 60+ scientific publications and a focus on turning validated methods into operational solutions.

05

AWS GenAI Challenge Winner

GoPilot was selected as a winner of the AWS Geospatial GenAI Challenge 2026, recognizing our work at the intersection of AI and Earth Observation.

Services

RASID delivers focused monitoring products and one-off analyses across imagery quality, urban and environmental change, climate and GHG, agriculture and document AI all on the same in-house pipeline.

01

AI Engineering & Consultancy

From AI strategy and model development to production deployment, we design and integrate AI systems across agentic AI, computer vision, RAG, OCR and MLOps. We build AI agents that combine LLMs, tools, data and workflows to automate complex tasks.

02

Data Engineering

Design and development of scalable data pipelines, from data ingestion and transformation to processing, storage and delivery. Integration of structured and unstructured data to support analytics, AI applications and operational workflows.

03

Urban Analytics

Building and settlement change, road condition, urban heat, land-use change and environmental monitoring from multi-source imagery.

04

Climate & Environmental Intelligence

Methane detection, climate-risk analysis, wildfire and flood risk, landscape monitoring and other climate-related applications.

05

AgriTech

Crop monitoring, crop mapping, wheat and banana analytics, grain-bin classification and yield forecasting.

06

Analysis-Ready Satellite Data

Raw satellite imagery processing, quality assessment, anomaly detection, geometric and radiometric correction, orthorectification and analysis-ready data preparation.

EBRD CLIMATE CHANGE INNOVATION · Methane Monitoring

Oil&Gas Methane Plume Monitoring

OVERVIEW

AI-based methane plume detection and quantification for oil & gas operations using satellite imagery.

SOLUTION (METHODOLOGY)

Physics-informed AI detects potential methane plumes and supports rapid site-level investigation.

PROBLEM

Methane leaks from oil & gas infrastructure are difficult to detect and monitor at scale.

RESULTS

80% of confirmed UNEP plume events recovered, with results delivered in minutes.

AI AGENT . GEOSPATIAL

GoPilot: RASID's AI Geospatial Agent

OVERVIEW

An AI geospatial agent that turns natural-language requests into executable Earth Observation workflows.

SOLUTION (METHODOLOGY)

Built on AWS Bedrock and Strands, with Claude as the LLM backbone and AI models, geospatial tools and GIS integrations connected through an agentic workflow.

PROBLEM

Geospatial analysis often requires specialist GIS skills, complex data preparation and manual scripting.

RESULTS

Award-winning AI geospatial platform, deployed through a production web application with GIS integrations.

AGRITECH · CROP MONITORING · BANANA TR4

Banana Crop Monitoring

OVERVIEW

Satellite-based crop monitoring for banana plantations, with a focus on early detection of Fusarium Wilt (TR4).

PROBLEM

Fusarium Wilt (TR4) can devastate banana crops before visible symptoms appear, creating a need for early warning.

SOLUTION (METHODOLOGY)

Sentinel-2 imagery is analysed to detect crop stress and potential disease signatures before visible outbreaks.

RESULTS

Operational crop-monitoring workflow combining phenology analysis with potential TR4 stress detection.

PRIVATE SATELLITE-IMAGERY PROVIDER · 2026

Analysis-Ready Satellite Data

OVERVIEW

AI-based pipeline that corrects geometric and radiometric anomalies in high-resolution satellite imagery and converts raw data into Analysis-Ready Data (ARD).

SOLUTION (METHODOLOGY)

Deep-learning co-registration, orthorectification, radiometric enhancement and automated cloud, haze and shadow detection and removal.

PROBLEM

Geometric distortion, radiometric inconsistencies and atmospheric artefacts can make satellite imagery difficult to use and require costly manual correction.

RESULTS

Client-ready ARD pipeline processing ~200 GB in ~2 hours, turning raw imagery into sellable products.

Projects

R&D and consulting projects delivered by a team with experience across AI and geospatial technologies.

REF	PROJECT	BENEFICIARY
P08	Synthetic Methane Plume for Satellite-Based MRV	Brazil-based Client
P07	Oil & Gas Methane Plume Monitoring	EBRD Climate Change Innovation Programme
P06	Banana Crop Monitoring	Private Agricultural Client
P05	AWS GenAI Challenge 2026	Amazon AWS
P04	AI for Food Security in the Arab World	AOAD
P03	Grain Bins Classification across the USA	US-based AgriTech Client
P02	Handwritten OCR for the Public Sector	UNDP - RBAS
P01	RAG Knowledge Platform	Private Consultancy Client

Team

A senior team combining research, AI engineering, geospatial expertise and commercial experience directly involved in every engagement.

01

Dr. Ali J. Ghandour

AI R&D AI Consultant

02

Reda Haidar

Commercial & Strategy Director

03

Hasan Nasrallah

AI Solutions Architect

04

Hasan Wehbi

AI System Engineer

05

Mohamad El Moussawi

Platform Engineer

06

Amira El Halabi

BD & Pre-Sales

Let's Talk.

RASID delivers bespoke AI consulting, data engineering and geospatial solutions, combining technical expertise with custom development to address complex real-world challenges.
