RASID رصد

Seeing Earth, Smarter

GoPilot

One platform for geospatial data, AI models and analysis.
Ask in plain language.
GoPilot figures out what it needs and delivers the answer.

WHO WE ARE

From Earth Observation Expertise to GoPilot

Eleven years of EO expertise, distilled into one autonomous GeoAI agent.

01 **R&D**

Strong in-house R&D team · 60+ journal & conference publications

02 **EO + AI Foundation**

Remote sensing · Deep learning · Time-series imagery · In-house geospatial Python

03 **Proven GeoAI**

Urban & environmental · Climate & disaster risk · Methane & crop monitoring

04 **GoPilot**

10,000+ geospatial datasets · Multiple AI models · Autonomous orchestration

The Challenge

Geospatial Stack Keeps Growing.

New datasets, satellites, AI models and analytical technologies create more opportunity, and more complexity.

Data Fragmentation

Thousands of datasets across providers, formats and sources.

Model Fragmentation

New AI models and methods appear constantly. Choosing the right one is hard.

Expertise Bottleneck

Users shouldn't need to know which data, model or workflow will answer a question.

✦ **GoPilot hides the complexity and turns the growing geospatial stack into one natural-language experience.**

Value Proposition

One Platform. Every Data Source. Every Model.

GoPilot brings geospatial data, AI models and analytical technologies together and makes them accessible through one natural-language interface.

Technology Agnostic

GoPilot is not tied to one data provider, model or analytical method. It can use the technology that best fits the question.

One-Stop Geospatial AI

Data, models and analysis are brought together behind one interface and one platform.

Always Evolving

RASID's R&D team continuously evaluates new datasets, AI models and technologies and integrates the most useful capabilities.

✦ **You don't need to keep up with the geospatial technology stack. GoPilot does it for you.**

THE SOLUTION

You Ask. GoPilot Figures Out the Rest.

Ask what you want to know. GoPilot decides what data, models and analytical steps are needed to answer it.

Natural Language

Describe the question in plain language. No need to specify datasets, models or processing tools.

Autonomous Orchestration

GoPilot combines multiple datasets, AI models and analytical steps in one workflow.

Actionable Output

Get an answer backed by analysis, with map-ready layers you can use immediately.

Capabilities

Ask for Any Geospatial Data, Anywhere.

GoPilot provides natural-language access to 10,000+ geospatial datasets spanning imagery, land use, infrastructure, buildings, agriculture, climate, and more.

Imagery and Raster

Optical, multispectral, SAR, hyperspectral, DEM, land cover, land surface temperature, and more.

Vector & Geospatial Layers

Buildings, roads, administrative boundaries, infrastructure, crop types, and more.

Climate & Environmental Data

ERA5, climate variables, environmental indicators, and other Earth-system datasets.

✦ **Just ask, name a place, or draw an area. GoPilot finds the data you need.**

Capabilities

One Question. Multiple Data Sources. Multiple AI Models.

GoPilot dynamically combines multiple datasets, AI models and analytical steps to answer the question.

Geospatial Data Stack

- Imagery, raster & vector layers
- 10,000+ geospatial datasets
- AI models & embeddings
- Climate & environmental data
- Agriculture & crop data

→

GoPilot Orchestration

- ✓ Combine multiple layers in one analysis
- ✓ Detect changes across time and space
- ✓ Calculate indices, trends & statistics
- ✓ Identify patterns and relationships
- ✓ Answer complex geospatial questions

© 2026 RASID. All rights reserved. Confidential and proprietary.

Capabilities

No GIS Software. Just a Browser.

GoPilot is delivered as a SaaS so users can access the same evolving data and AI stack without managing a technical stack.

Everything In-Browser

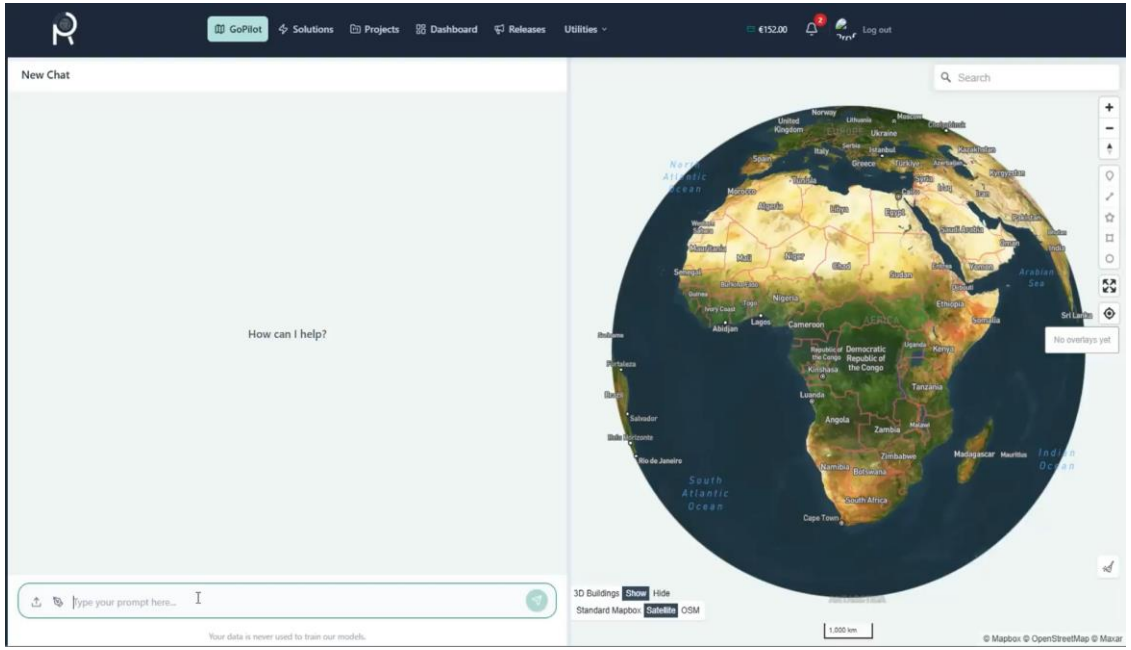

Search, draw or upload an AOI, run analysis and view results. All in the browser.

One Experience, Many Technologies

The user experience stays simple even as the underlying data, models and methods evolve.

No Stack to Maintain

No GIS software, drivers or Python environment to install or manage.

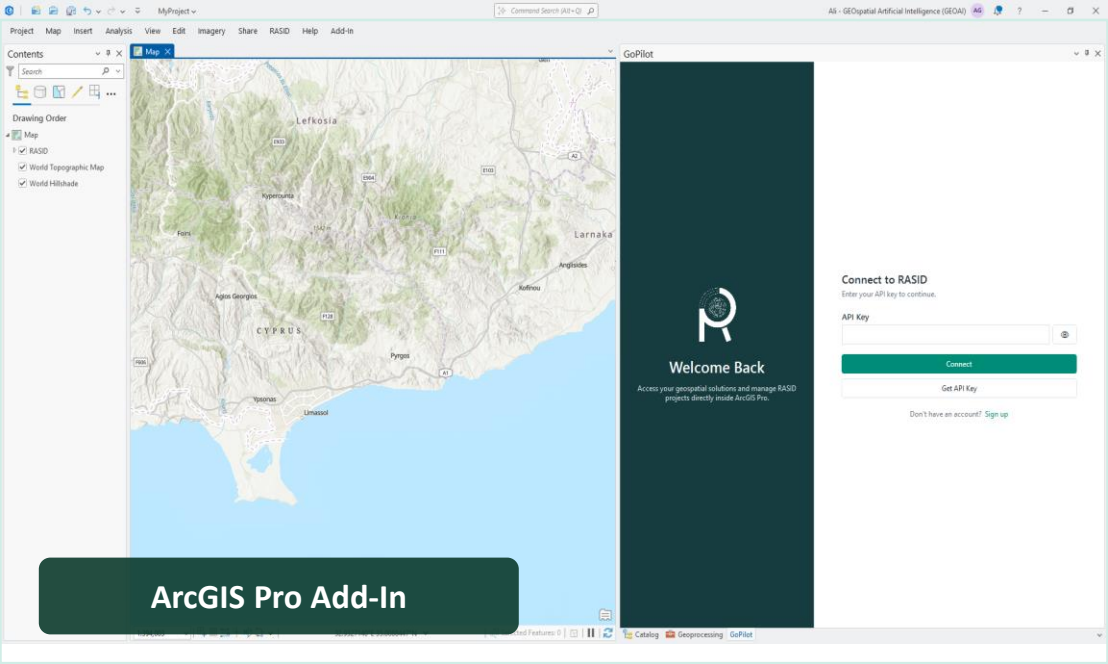

✦ **The complexity stays behind GoPilot. The user just asks the question.**

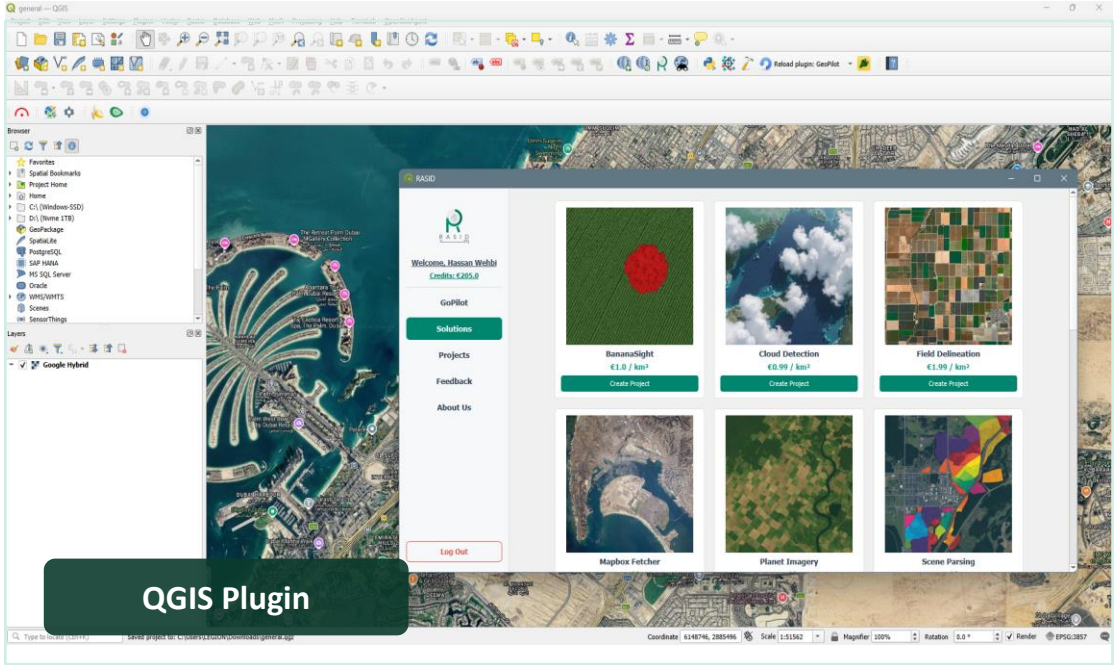

© 2026 RASID. All rights reserved. Confidential and proprietary.

Capabilities

One AI Agent Across Your GIS Stack.

Use the same GoPilot intelligence in the browser, ArcGIS Pro or QGIS, without changing how you work or ask questions.

✦ **Browser-first for everyone. Native ArcGIS Pro & QGIS integrations. OGC-compliant for open geospatial interoperability.**

Use Cases

Ask Complex Geospatial Questions.

GoPilot combines multiple datasets, AI models and analytical methods to answer them.

Agriculture

Delineate every field in an AOI in France and analyze wheat phenology.

Energy & Environment

Detect methane plumes across an area of KSA and analyze their persistence over time.

Disaster Response

Map wildfire burn scars in Madrid and quantify vegetation recovery using multi-temporal imagery.

Disease Control

Monitor a banana plantation for early signs of TR4 disease.

Forestry & Carbon

Count trees across a reforestation area and estimate changes in forest cover.

Defense & Intel

Detect changes across a border region using embeddings.

Demo Use Cases

Watch GoPilot in Action.

Real sessions as the agent plans, retrieves data, runs analysis and delivers the results.

aws

GenAI for Geospatial
2026 Challenge
Winning Team
Selected as 1 of 14 winning teams across EMEA

Infrastructure Monitoring

Detecting infrastructure changes across KSA from a single plain-language request.

Deforestation

Monitoring land-use and vegetation changes over time using embeddings.

Phenology Analysis

Tracking wheat growth stages and vegetation health over time.

Pricing

Simple, Usage-Based Plans.

Every plan includes a monthly token allowance and a set of platform privileges.

Free

€0 /forever

50,000 tokens / mo

- ✓ Basic datasets
- ✓ Basic AI models
- ✓ Export Raster and Vector results
- ✓ Session History Management
- ✓ Storage 1 GB

Pro

MOST POPULAR

€149 /mo

500,000 tokens / mo

- ✓ Everything in Free
- ✓ Pro datasets
- ✓ Pro AI models
- ✓ Dashboard
- ✓ GoBox
- ✓ QGIS Plugin
- ✓ Storage 100 GB
- 🔒 Personal license · 1 named user

Business

€499 /mo

2,500,000 tokens / mo

- ✓ Everything in Pro
- ✓ Premium datasets
- ✓ Premium AI models
- ✓ ArcGIS Pro Add-in
- ✓ Storage 1 TB
- ✓ Priority email support
- 🔒 Commercial license · 1 named user

Enterprise

Contact us

- ✓ MCP connector, plug GoPilot into your Agent
- ✓ Custom on-prem installation
- ✓ Custom Cloud installation
- ✓ Dedicated account manager

Need more tokens mid-period? → Top up with one-time token packs: 100k for €20 · 500k for €85 and 2M for €300.
