One framework, four gears

GoPilot plans a job, picks the tools, chains them and checks the output. Your plan decides which language models it can reach and how hard it is allowed to think before it acts.

GOPILOT

What you are actually buying

FREE

51 tools

A working agent.

Basic missions, the two core models, band maths, format conversion, masks, previews and every catalogue we index. The token allowance is the limiter, not the toolbox.

PRO

73 tools

The open catalogue, and real analysis.

Climate, embeddings and open-data gateways, four more models, and the spatial toolbox: clipping, subsetting, filters, buffers, area.

BUSINESS

92 tools

Commercial imagery, and time.

Very-high-resolution basemaps, the ArcGIS Living Atlas of data and pretrained models, five bespoke pipelines, plus overlay, spatial joins, change detection and phenology.

ENTERPRISE

93 tools

Your infrastructure, your agents.

Everything above, document intelligence, and an MCP connector so your own agents can call the whole toolset in your own tenancy.
